

M a k e a B o o k i n g

At Abcom we are the actual software developers of the market leading administration within your chain, not just an agent who has no control over the direction their product takes.

Let Abcom conduct an **eProphet Administration System Efficiency Review** on your system. Not only will this allow you to improve your staff's efficiency and capacity for work.

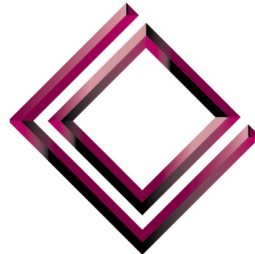

But the reviews also provide Abcom with invaluable feedback on new features and better methods which could be developed into the eProphet Administration System to further move your software into the future.

The **eProphet Administration System Efficiency Reviews** are very reasonably priced and we welcome any enquiries you might have regarding this service.

Further information and bookings are available by contacting Abcom via the methods listed in this brochure.

eProphet Administration System Efficiency Reviews

Abcom

eProphet Administration System Efficiency Reviews

We are excited to introduce The eProphet Administration System Efficiency Reviews. This review will be using analytical procedures to examine the financial data within your eProphet Accounts System, to identify a wide range of transactional and system errors.

Practical solutions are recommended based on findings to recover lost profit margins and to prevent future errors occurring. Our aim is to not only streamline your Accounts processing, but to also capture any inefficiencies that have crept into your system over the course of time, thus resulting in an inaccurate set of financial reports produced.

The review will also help to identify areas of potential inefficiencies in the current methods used by your administration staff. Over time new features are added to the eProphet Administration Systems, and sometimes those new features and functions aren't always put to use in their most efficient way.

eProphet Payroll

System Setup

This review will look at whether your eProphet Payroll system is setup to optimise processing speed and accuracy

Current Features

Analysis of current and recently added features to determine if they are being used by your administration staff to their fullest potential, thereby allowing your administration staff to function at their fullest capacity

eProphet Accounts

System Setup

This review will look at whether your eProphet Accounts system is setup to optimise processing speed and accuracy

Current Features

Analysis of current and recently added features to determine if they are being used by your administration staff to their fullest potential, thereby allowing your administration staff to function at their fullest capacity

Accounts Payable

Analysis of supplier transactions to identify and recover erroneous payments and ensure purchasing benefits have been claimed in full

GST Analysis

Evaluation of historical Accounts Payable data to identify incorrect calculation and processing of GST

Supplier Statement Analysis

Review of all supplier statements to identify credits/ invoices that have been overlooked

Supplier Master File Analysis

An Analysis of the Supplier Master file to ensure there are no repeated Supplier records and all Supplier records are correctly set up

General Ledger Analysis

A complete review of all standing journal entries to identify any inefficiency within the General Ledger, combined with a complete analysis of the Company/ Companies Balance Sheets

Performance Analysis Reporting

A set of tailored reports provided at the completion of the analysis to present findings to the Licensee, and provide recommendations for improvement to the organisation's processes and financial operations.
