

Central

Part of the eProphet Back Office System

A range of tools and reporting to manage your store's back office.

Overview

eProphet's Central system is the primary data warehouse that integrates the various modules of the eProphet system. Central is designed to remove the duplication of shared data and contains many of the day to day functions such as Open, Close, Online diary and calendar, internal memo's, projected sales, daypart sales and sales ledger reporting.

Features

- > Comprehensive sales ledger for tracking every aspect of store sales history.
- > Store tasks can be assigned and tracked for one off and recurring jobs to be completed by the shift manager.
- > Colour coded calendar to record holidays, events, promotions and notes that pertain to the operation of the store.
- > Online diary in "rich text" format. Ability to easily write notes and record information to be read by all users.
- > Party booking system to record upcoming birthday parties at the store.
- > Memo system that acts as an internal email for all eProphet users at the store. Memo's can be sent to individuals, a group or all users of the system improving internal communications and allowing for more efficient follow-up.
- > Accurate projected sales are easily created from historical day part sales utilising an easy to use wizard format.
- > Day part sales are automatically downloaded every 15 minutes with no user intervention and can be reported in 15 minute, 30 minute, hourly and shift format.
- > A web enabled menu that can be used to display live web content from within eProphet, such as store updates.
- > A highly configurable store trading hours calendar.
- > A range of extensive sales reports to help analyse and review store sales trends over time and store sales area.
- > eProphet user accounts can be managed for employees through the System Access Control tool.

Benefits

- Comprehensive Reporting.** All sales ledger, tasks, diary, party booking, cash handling and snapshot reports are easily accessed for on screen viewing or printing.
- Simplified System Open/Close.** Open and Close options are presented in an easy to use checklist format so that these processes are completed accurately without missing important steps. After each option has been completed it is time stamped, eliminating any uncertainty of what step is next should the user be sidetracked with shift responsibilities.
- System Access Control.** This process is pre configured and can be maintained and altered only by your nominated administrator. System access control provides a login system removing the need for extensive passwords and only permitting access to certain parts of the system to specific users.
- Integrated and Data Interchange.** Information recorded in central is accessed by relevant modules so that processes are not duplicated and data integrity is improved.
- Efficiency.** Well-designed entry screens, automatic download and systematic processes allow for information to be recorded seamlessly.
- Accountability.** Regulated access levels combined with process logging by user, provides a superior means of control and follow-up on work performed in the system.
- Communication.** Diary, Memo, Calendar and Tasks provide effective and efficient means of communicating relevant store information to owners and managers.

Technical Aspects

Only available to eProphet users.

eProphet Central internet enabled functionality requires an approved broadband internet connection.
